

A Total Solution for Business Process Management

Meta Software offers a suite of tools to meet a variety of business process improvement needs. The **WorkFlow Analyzer** toolset incorporates **WorkFlow Modeler** for diagramming current business processes and proposed changes and **WorkFlow Simulator** for analyzing the effects of these changes. Options are available to translate these models to workflow automation software such as Plexus, a Division of BancTec's FloWare®, FileNET's Visual WorkFlo® and DST Systems' AWD®. We also output WPDL, a textual process description based on the WfMC standard. **Business Model Repository** stores WorkFlow Modeler models in a centralized location to simplify collaboration and revision tracking.

Capture complexity

Meta Software can help take the guesswork out of business process improvement efforts. With our WorkFlow Analyzer toolset, composed of WorkFlow Modeler and WorkFlow Simulator, you can study your current business process in detail, pinpoint bottlenecks, and understand cycle times, throughput rates and resource utilization to identify opportunities for improvement. Before you implement any changes, our solution lets you predict the effects of those changes to ensure you are making the best decision.

Build teams, consensus

Using the Meta Software toolset, team members can communicate more effectively, and thoroughly capture all of the necessary process information that describes processing steps and responsibilities. By using WorkFlow Analyzer as a team, and incorporating all of the necessary business process information into the modeling tool, employees become part of the change themselves. It is not imposed on them.
